

A major player in the **DESIGN**,
AUTOMATION and **INTEGRATION**
of high-quality equipment in the field of **BIOTECHNOLOGY**.

PILOT CONCEPT™ & INDUS CONCEPT™ RANGE

GPC's ability to handle tailor-made, large and medium-sized projects has been amply demonstrated.

We offer stainless steel vessels with high polished finishes as from a 10-liter size that can be stirred and double jacketed. If required for your project, **we can integrate the cleaning and/or sterilization-in-place** of your equipment. **The bioreactors are equipped with precision instruments** to ensure reliable and high-quality culture control.

A programmable controller coupled with our C-Bio 2™ supervisor drives and monitors each subset of the installation. **The C-Bio 2™ software, designed and developed by GPC's biotechnology experts,** is powerful, reliable and intuitive.

Even though we have our own hardware and software standards, we are able to meet your particular specifications in terms of measuring instruments, programmable controllers or supervisors.

Our know-how in mechanics, electricity, automation and IT are the keys to the successful integration of our equipment in your industrial context.

“ We have the skills required for each stage of your project, whether it be a compact skid or a stand-alone industrial installation. ”

OUR PRIORITIES

- **Satisfy you.** GPC is a united, motivated and dynamic team.
- **Innovate on a daily** basis to assist you with your industrial challenges.
- **Respect your technological and environmental** constraints: flexibility and adaptability are two of GPC's fundamental values.

TURNKEY INDUSTRIAL INSTALLATION

We provide you with all our expertise to offer you the solution best suited to your industrial installation.

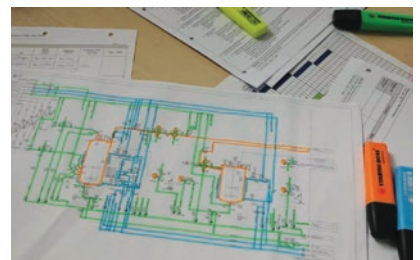

Whether it be for preparing the medium, harvesting, simply supplying equipment or complete installation integration, **GPC can offer you the solution you require.**

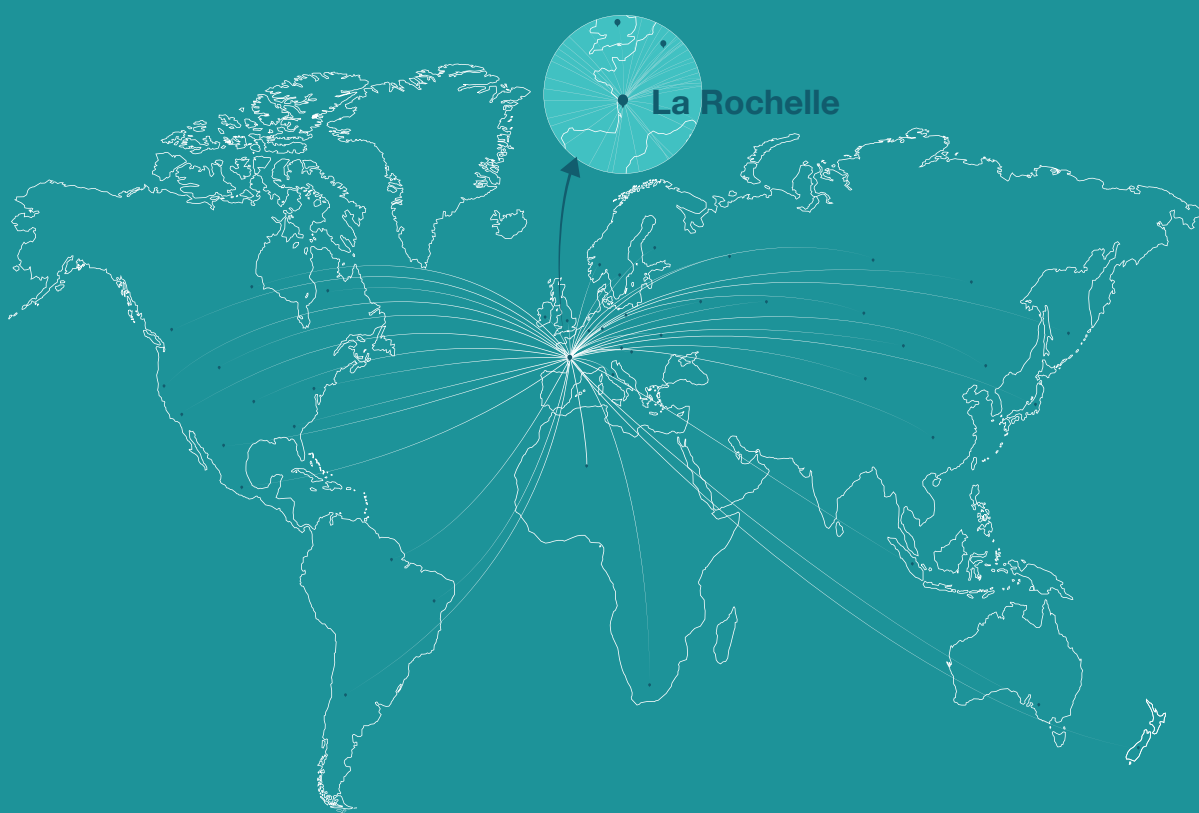

Our technical teams, who are also **experienced in the field of biotechnology**, are present at each stage of your project and keep to your specifications as well as the **quality rules and standards in force.**

Our installations are designed to last!

To ensure your total satisfaction, you can choose the maintenance contract that is best suited to your use of the equipment.
